

7.1.3 - Describe the facilities in the Institution for the management of the following types of degradable and non-degradable waste

- Solid waste management
- Liquid waste management
- Biomedical waste management
- E-waste management
- Waste recycling system
- Hazardous chemicals and radioactive waste management.

Solid waste management-The institute has developed a system of solid waste management is very effectively on campus. The college has installed separate dustbins to collect biodegradable solid waste like tree leaves droppings, paper-cups, waste papers etc. To avoid the plastic in the campus, the institution rigorously avoids use of plastic. Most of the office work is paperless by the use of software which minimizes the waste.

Liquid waste management- All labs of the college have facilities for proper disposal of liquid waste. This practice has reduced the dangers of exposing the harmful chemicals to the society by discharging it in drainage and it also helped to make the campus green.

E-waste Management- Some of the old computers are repaired and reused. Some parts of computers are used for other systems. Non repairable monitors, CPUs, Pen drives, electronic devices and scrap materials are sold to scrap dealer for further recycling and appropriate disposal.

Waste recycling system- Old newspapers, used papers and journal files, workshop scrap etc. are given for recycling to external agencies. Plastic waste is collected and properly handed-over to the vendors.

Management of the various types of degradable & Non- degradable waste
